

# EROAD customers pay less RUC...\*

**E=ASY RUC**  
\* due to administrative efficiencies, and enjoy improved cashflow, better control and less hassles. Talk to us and we will prove that Eroad's advanced Eruc system will transform your business and increase your profits.

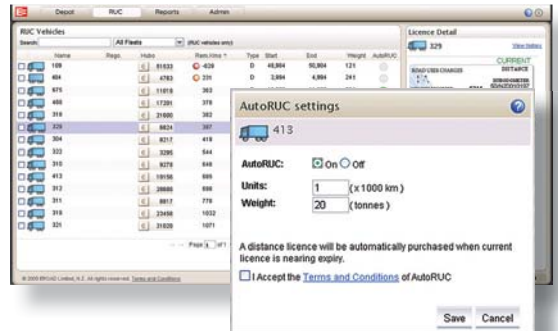

Whatever else you do to improve your business, you cannot afford to ignore the benefits **Eroad** will deliver to your company.

# 1

## Eliminate administration costs

Eroad's simple web based Eruc system will revolutionise the way that you manage RUC, the biggest single cash cost for the trucking industry.

**Turn on AutoRUC to automatically buy RUC so you never run out again!**

# 2

## Ditch the hubo!

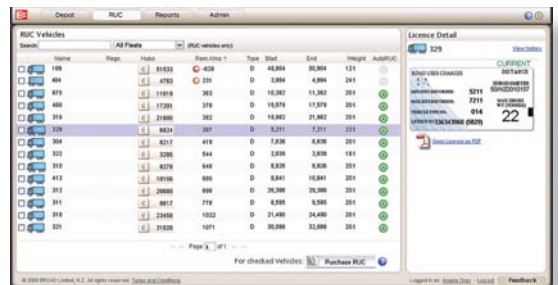

Replacing broken mechanical hubodometers is time consuming and costly. As every truckie knows, the mechanical hubodometer is unreliable, inaccurate and prone to sudden failure, always at the most inconvenient time and place.

# 3

## Optimise your RUC

Online RUC direct to your truck gives you the ability to easily purchase and display new distance and supplementary licenses to better match the actual vehicle weight with the RUC licence weight, while ensuring full legal compliance.

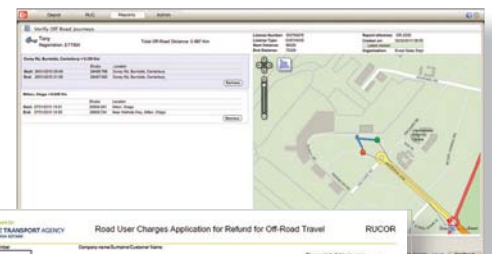

**Stop overpaying for RUC, and reduce the working capital required to support RUC outlays through more timely and accurate RUC purchases.**

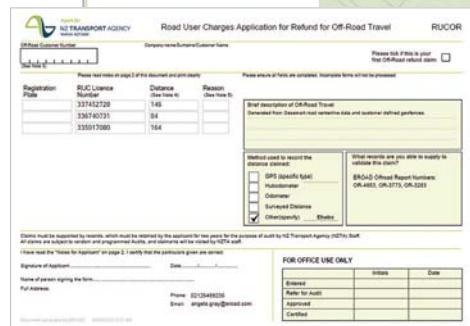

# 4

## Off-road reclaims

Eroad takes off-road refund automation to a whole new level. This is because our system keeps track of the licences you buy, the accurate km readings and also all of the off-road locations travelled by your trucks and trailers.

**As each RUC licence expires, the Eroad system pre-populates the RUCOR form ready for submission to NZTA, and provides an accurate estimate of the refund. Just review, sign and collect your refund!**

Join the **Eroad** revolution today.

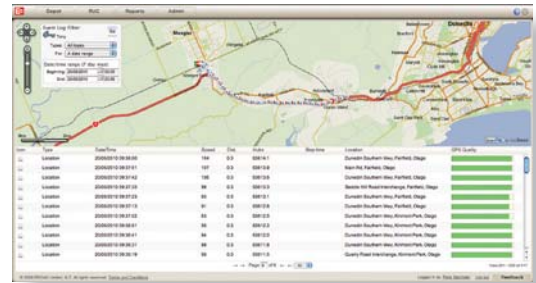

# 5

## Take advantage of FREE fleet tracking and reporting

With the Eroad system you get advanced fleet tracking and evidential grade reporting out of the box. Real time vehicle location is displayed on a user-friendly digital map.

### Vehicle activity reporting includes:

- Journey time and distance history
- Ignition events
- Running and stop time
- Total distance
- Geofence events and history
- Over-speed events
- Off-road travel
- RUC purchase history
- RUC expenditure

## Choose your business tools

# 6

The advanced Eruc technology is backed by partnership alliances that enable Eroad to provide our clients with the most extensive set of business tools available.

This includes advanced scheduling and work planning services developed and available from Alliance Partner VisFleet. The Eroad alliance network ensures that you can benefit from having a one-stop partner for all your on-board transport solutions.

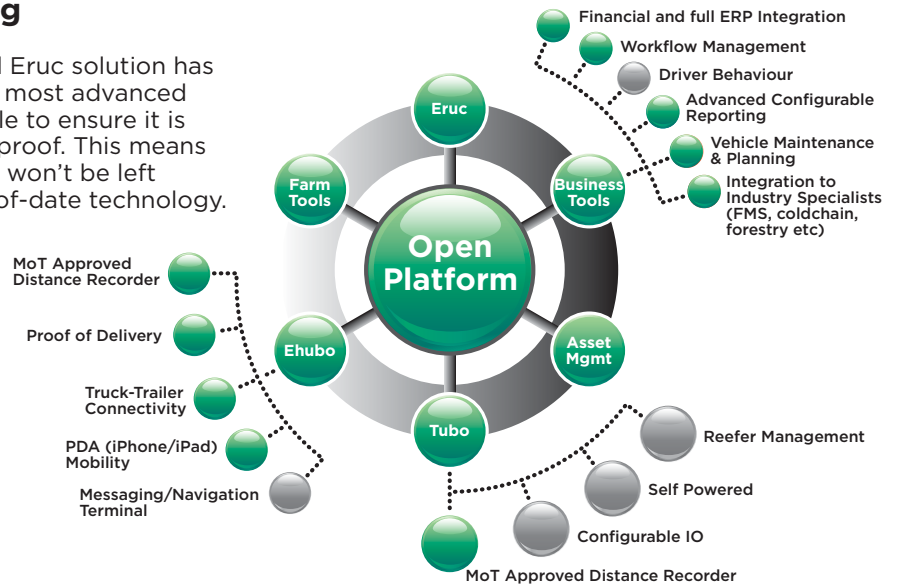

## The benefits of built-in future proofing

# 7

Eroad's end-to-end Eruc solution has been built with the most advanced technology available to ensure it is flexible and future proof. This means that our customers won't be left stranded with out-of-date technology.

The Eroad system will support any reforms planned for the RUC regime, and its innovative web based architecture means our clients will always have the latest software updates.

Whatever else you do to improve your business, you cannot afford to ignore the benefits **Eroad** will deliver to your company.
